

Let us help your business prepare
for flu season.

Call us today to schedule fall influenza vaccinations for your staff!

The Centers for Disease Control (CDC) recommends receiving the seasonal flu vaccine once it becomes available in the fall. It takes about two weeks after vaccination for the body's immune response to fully respond. Jefferson Community Health & Life Occupational Health can provide influenza vaccinations at your business from late September through late November. Our onsite flu shot clinic scheduling is flexible to accommodate your company's schedule. Receiving the vaccine at the workplace is a quick and easy way to keep your employees healthy during the flu season.

In order to provide flu vaccinations in the fall, we must have orders in by July 31.

For more information on keeping your employees healthy—with influenza vaccinations, health screenings risk assessments or return to work testing—call Lori Ohlde RN at Jefferson Community Health & Life Occupational Health at 402-729-6857.
